How much do you want to collect and where will the money collected for preICO go?

How can investors purchase Anyco tokens?

What is the main idea of the project?

Anycoins.shop - Is a one-stop-shop online store where you can buy and sell any product using any crypto currency. Buying goods using a specific crypto currency raises its demand. The built-in platform for promotions encourages others to buy goods using the crypto currency you need, thereby further increasing its demand and value.

What goods and services will you sell first?

First, we will give priority to digital goods (info-products, software, scripts, author's music, site templates, photo-stock, tickets, certificates, etc.) since this type of product does not require storage and delivery.

Next, we will give priority to new trends and exciting new technology products, for example, see [link](#).

We believe that such products will be in high demand and we want it to be the first to offer them on our platform.

We can streamline your everyday shopping for items such as food and beverages, household chemicals, animal food, personal services, digital subscriptions, etc. by offering subscriptions for items you use most.

What problem does the product solve and for whom?

1. For investors, traders, miners and ICO (owners of crypto-currencies). Access to the tool to increase the price of any desired crypto currency.

[Back to FAQs](#)

2. For buyers and sellers, they can have one account for the purchase and sale of any goods and services in any field.
3. As a seller you can negotiate with the manufacturer of the goods on the Promotion place and organize a promo-campaign at a discount to stimulate payment in the crypto currency you need.
4. For buyers we can streamline your everyday shopping for items such as food and beverages, household chemicals, animal food, personal services, digital subscriptions, etc. by offering subscriptions for items you use most.
5. For Traders - to increase the price of your crypto currency, you just need to become a seller of a popular product and offer a discount to the buyer on the method of payment for your crypto currency.

How will our platform improve the block-chain?

We encourage people to buy goods using any crypto currency, therefore we increase the demand and the number of transactions in the blockchain of different crypto-currencies.

What is the function of the token? (Safety and benefits)

Utility-tokens for preICO are not shares, but give you the opportunity to get familiar with and use our platform.

To create a promotion to raise the price of your crypto currency, you must pay 1 ANYCO token.

By becoming an early-adopter of our platform, you can secure a popular niche of goods.

You can create automated drop-shipping stores, and sell goods from anywhere in the world without storing inventory.

If you do not want to create shops yourself, you can invite new sellers to our site and have 1% passive income from all sales of the affiliates goods. To do this, you only need to pay 1 ANYCO token.

Everyone who participates in the preICO will have a guaranteed opportunity to buy tokens on the ICO. The advantages of tokens on the ICO are detailed in the [WhitePaper](#). 1% of all sales on the platform anycoins.shop will be automatically distributed among all the holders of the tokens. Once the token is released on the exchange, you can sell it for a profit.

What stage is the product in currently?

We have a working platform and online stores at anycoins.shop. (It is similar to Amazon.com in terms of scope). We have created 2 crypto-currencies; ANY and ANYCO. A smart contract was written to create the ANY and ANYCO tokens. We are currently working on a system to sell tokens.

We are near finalizing the payment method and setting up the ShapeShift API for the ability to automatically convert to your desired crypto currency when completing the transactions. We are near finalizing work on a platform for promotion. We are close to finalizing the connection with PasslFix to automate the process of sending and shipping goods. We are completing the integration with partners who provide outsourcing support for online stores. We are close to finishing the Website and White Paper. We are looking for good advisors. We are preparing the description of the BOUNTY-company and the post for bitcointalk.

How detailed is the road map?

Our road map is detailed from now until 2019, with all the basic steps laid out. See White Paper for details.

Who is on the team?

1. Sergey Zhilenko. The founder covers all spheres at a director level.
2. Anna Eremina. project coordinator, HR manager, team selection, works with translators.
3. Stanislav Swistunov. Technologist, Sr. Mobile Developer, teamleading experience. Software developer expert with several deployed mobile applications. Experienced professional programmer to support a mobile application.
4. Barbara Smith. Translates the project into English: White paper, FAQ and pre-ICO website. Experience in Sun Microsystems, JavaSoft, CISCO, Intel, IBM and Apple.

Is there a smart contract code for github?

<https://github.com/anycoins/smart-contract-on-Eth>

White Paper

The updated White Paper in English can be viewed at this [link](#).

What is done to protect against hackers?

We run preICO on Vawes so no one can hack our smart contract, the main security rule is not to buy tokens whose name differs from ANYCO.

What is done to ensure the safety of investor funds?

ANYCO's tokens have already been verified on the Vawes platform, so at any time investors can sell ANYCO tokens to other people on the DEX exchange.

How much do you want to collect and where will the money collected for preICO go?

Our pre-ICO plan is to raise \$9,500,000.

We have to run the world's largest retail market (marketplace), so you know you need a lot of money. All funds will be spent on the finalization of all planned functions of the project, as well as PR and marketing. For more details, see the document «Finance road-map».

How can investors purchase Anyco tokens?

October 30 ANYCO tokens will be put up for sale at \$10 for 1 token on the DEX exchange from the Vawes-platform. In the second week, these tokens can be bought for \$15, and in week 3 at \$25. You can buy with BTC, ETH, VAWES and USD.
